Bartlett Blinds is a market leader in the manufacture of external awnings, providing exceptional quality and service Australia wide for over 55 years.

We supply the quality Bartlett Blinds range using only the best quality materials. We are committed to giving you the best service and after sales support possible. Regardless of the application, we have a Bartlett Blinds product to suit your needs.

Bartlett Automatic Awning

The most common of the awning designs, the automatic awning operates on guides allowing the blind to be easily adjusted. Automatic awnings are available in a range of arm lengths to suit any style of home or application.

Available in mesh, acrylic and canvas fabrics.

Bartlett Blinds

Bartlett Fixed Guide Awning

The fixed guide awning operates on guide bars which are permanently fixed. This style lends itself particularly well to motorisation which allows you to move your awnings up and down with the ease and convenience of just pressing a button.

Available in mesh, acrylic and canvas fabrics.

Bartlett Straight Drop Spring Blind

Straight drop spring blinds are an alternative to the traditional verandah blinds. These blinds are great to cover in verandahs, patios and pergolas. The straight drop spring blind is ideal for providing protection for your outdoor entertaining area.

Available in mesh, acrylic and canvas fabrics.

Bartlett Straight Drop Geared Blind

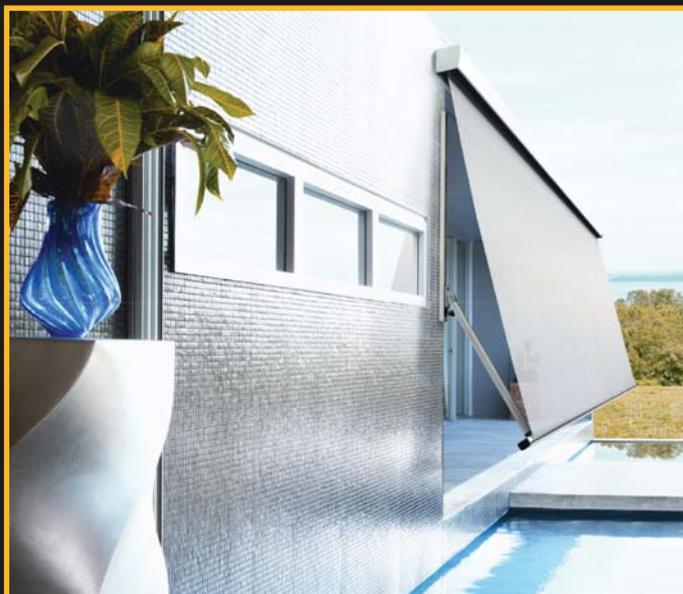

Straight drop geared blinds are ideal for protecting outdoor entertaining areas from the elements, adding an extra room to your home. A premium blind, this style is easily operated using a crank handle.

Available in clear and tinted plastic, mesh, acrylic and canvas fabrics

Bartlett Pivot Arm Awning

This style of awning is a heavy duty contemporary design ideally suited to larger windows where the awning needs to project away from the building to allow the windows to open. A premium style awning, the pivot arms have a modern anodized finish to complement the hardware of the blind.

Available in mesh, acrylic and canvas fabrics.

Bartlett Wire Guide Blinds

Wire guide blinds add that little bit of luxury. These stylish blinds operate on guide wires which are tensioned and permanently fixed. With the ability to be stopped at any level down the guides, the wire guide blind lends itself particularly well to motorisation.

Available in mesh and acrylic fabrics

Fabric Range

Canvas

Canvas has traditionally been the most popular fabric used for awnings. With 100% block out and long lasting reputation, canvas is the number one choice to block out the sun. Bartlett use quality Australian made canvas. Our canvas range has a vast array of colours and designs to choose from.

Benefits: 100% UV block out cools the room by up to 15 degrees.

Woven Mesh

Woven mesh has style and functionality that you just can't beat. This revolutionary awning fabric lets light in yet keeps out the sun. Unlike conventional awnings, woven mesh's unique design allows you to see through from the inside and enjoy the view whilst filtering out the sun's damaging rays and keeping the interior cool.

Benefits: 90% block out of the sun's heat without filtering out the light. Block out wind and rain whilst maintaining your view.

Acrylic

Acrylic is a light weight fabric which allows sunlight to penetrate through, without enabling you to see through the fabric. Unlike canvas, acrylic does not have a green backing, the back of the fabric is as you would see on the front.

Benefits: 90% block out of the sun's heat. Lightweight fabric and available in many colours.

Clear and Tinted Plastic

Clear and tinted PVC is a popular option for enclosing any outdoor entertaining area. PVC blinds are fully transparent allowing unrestricted view whilst blocking out the elements. These awnings also keep the warmth in during the cooler months allowing you to maximise the use of your outdoor area all year round.

Benefits: Treated with UV inhibitors to minimise the effect of the sun's harmful rays. 100% protection from the rain and wind.
